ARTIFICIAL INTELLIGENCE AND A-LIFE

AI AND A-LIFE

(New wave AI)

(Traditional AI)

(Neural networks)

(AI meets music)

(Intelligent robots)

(Computers and emotions)

(Virtual worlds)

(Evolving machines)

(Artificial immune system)

(Modelling real life)

(Intelligent agents)

WELCOME TO THE UNIVERSE of humanoid robots, intelligent insects and virtual creatures designed to fly real planes...

Researchers in artificial intelligence (AI) and artificial life (A-Life) make their living by modelling, copying or adapting systems from biology. The combination of human ingenuity and the explosion in computer power has created a host of creations that take as their starting point anything from human intelligence and emotions to genetic inheritance and evolution.

"Traditional" AI grew out of efforts to crack enemy codes in the Second World War. It aimed to capture human intelligence by following vast lists of rules programmed into a computer. Today, this approach is best known for creating Deep Blue, the computer that beat the chess world champion Garry Kasparov in 1997.

But this strategy has serious limitations because it seems unlikely to produce anything that really human intelligence. Instead, a new wave of AI is slowly making its mark. It relies to a large exten complex behaviours from the interaction of simple components. So, for example, networks of arti can learn and recognise patterns. Already such neural networks are advising financial wizards al their money and helping doctors to diagnose cancer.

A-Life focuses not so much on human biology but on biology in its widest sense. It has already g strange things as robots that work in teams, machines that evolve and virtual creatures that learr die. Today, biologists study evolution in virtual worlds, computers are protected from malicious vi immune systems, and in Oxford, a heart made from millions of software cells is teaching doctors medicine that no living heart could have done. Prepare to have your mind boggled...
